

The SIGMA Sophia, which is also known as the SIGMA Club is the Science club of Sophia College. Science is a respectable discipline and has always had an important place in our society. However, it has always been seen as drab and lifeless and it is never thought of as something to be enjoyed. Moreover, science has always been thought of as inaccessible and there is a misconception that only those who study science can truly appreciate this. At the SIGMA club, we aim to challenge these notions by designing activities that are enjoyable for everyone that are rooted in scientific principles. Our main aim is to organise activities for people across all fields and encourage them to appreciate Science and the relevance that it has in today's society. Furthermore, we also aim at providing a space for science students to explore science beyond the four walls of their classrooms.

For this year at SIGMA we are trying to inculcate activities from different fields with science as we believe that everything around us has a minuscule piece of science in it and hence is inter-related.
