SOPHIA COLLEGE, (AUTONOMOUS)

Affiliated to

UNIVERSITY OF MUMBAI

Programme: Mathematics

Programme Code: SBSMAT

F.Y.B.Sc.

2018-19

(Choice Based Credit System with effect from the year 2018-19)

Programme Outline: FYBsc (SEMESTER I)

Course Code	Unit No	Name of the Unit	Credits
SBSMAT101		CALCULUS-1	2
	1	Real Number System	
	2	Limits of a real valued function	
	3	Continuous functions	
SBSMAT102		ALGEBRA & DISCRETE MATHEMATICS -1	2
	1	Integers and divisibility	
	2	Equivalence Relations and Congruences	
	3	Functions and Binary operations	
SBSMATP1		MATHEMATICS PRACTICAL	2
	1.	Calculus-1 based on the syllabus.	
	2.	Algebra And Discrete Mathematics -1 based on the syllabus.	

Programme Outline: FYBsc (SEMESTER II)

Course Code	Unit No	Name of the Unit	Credits
SBSMAT201		CALCULUS-2	2
	1	Differentiation of real valued function of one variable	
	2	Applications of differentiation	
	3	Analytic Geometry in Euclidean Spaces:	
SBSMAT202		ALGEBRA AND DISCRETE MATHEMATICS -2	2
	1	Polynomials	
	2	Counting Principles	
	3	Counting Principles	
SBSMATP1		MATHEMATICS PRACTICAL	2
	1.	Calculus-2 based on the syllabus.	
	2.	Algebra and Discrete Mathematics -2 based on the syllabus.	

Preamble:

Many people believe that mathematics is one of the most challenging subjects to learn in school. However, it is still very important in today's world. Mathematics is crucial to comprehending and resolving issues that arise in our daily lives, from the sophisticated systems that run our society to the everyday devices we utilise.

An essential component in the continual development of science and technology has been mathematics. The number of applications of mathematics used in practical problems has grown significantly in recent decades. The F.Y.B.Sc. Mathematics syllabus for Semesters I and II have been designed to demonstrate to students the fundamental concepts of mathematics while exposing them to rigorous techniques systematically. Calculus is applied and necessary in every potential field of study. Discrete Mathematics and Algebra encourage logical and mathematical reasoning.

Today, mathematics is an important instrument in many areas, including natural science, engineering, medicine, and the social sciences, used extensively throughout the world. New mathematical discoveries are inspired by and implemented by applied mathematics, the area of mathematics that deals with transferring mathematical knowledge to other domains.

PROGRAMME OBJECTIVES

PO 1	To develop in the learner a scientific temperament.
PO 2	Along with developing domain knowledge of several disciplines in the scientific stream, to develop among the learners, the fundamental practical skills towards technical proficiency.
PO 3	To enable the students to gain employability in various professional courses, meet the requirements for industrial professions, and have an opportunity of pursuing entrepreneurship.
PO4	To enable the learners to comprehend a wide range of social and environmental challenges and develop solutions-oriented strategies to issues

PROGRAMME SPECIFIC OUTCOMES

PSO 1	The learner will be able to use logical and critical thinking abilities in problem solving and develop the habit of self-learning by the end of the course.
PSO 2	The learner will be able to create and apply quantitative models that emerge in business, social science, and other areas.
PSO 3	The learner will be able to analyse the mathematical outcomes and use them to solve numerous issues that arise in various areas of mathematics and associated disciplines
PSO 4	The learner will be able to identify trends and make a distinction between the problems' core components and non-essential ones.
PSO 5	The learner will be able to utilise technological expertise to address certain theoretical and applied issues in mathematics and other fields.
PSO 6	The learner will be able to convert verbally supplied information into a mathematical form, choose and use the proper mathematical formulas or techniques to process the information, and then make the necessary conclusion.
PSO 7	The learner will be able to recognise the relationships between different areas of mathematics and the connections between mathematics and other disciplines.

SEMESTER 1

NAME OF THE COURSE	CALCULUS-1	
CLASS	FYBSC	
COURSE CODE	SBSMAT101	
NUMBER OF CREDITS	2	
NUMBER OF LECTURES PER WEEK	3	
TOTAL NUMBER OF LECTURES PER SEMESTER	45	
EVALUATION METHOD	INTERNAL ASSESSMENT	SEMESTER END EXAMINATION
TOTAL MARKS	25	75
PASSING MARKS	10	30

COURSE OBJECTIVES:

CO 1.	To enable the learner to become familiar with the fundamental properties of the real number system and its subsets, which form the basis of real analysis. Comprehend the ideas of a function's limit and continuity, and to use the many results of limits to find solutions to issues.
CO 2.	To enable the learner to have a thorough understanding of functions, a key building block of all sciences, and the ability to assess a function's properties and draw its graph.
CO 3.	To enable the learner to comprehend the ideas of a function's limit and continuity, and to use the many results of limits to find solutions to issues.

COURSE LEARNING OUTCOMES:

CLO 1.	The learner will be able to recall the meanings of the terms supremum, infimum, bounded sets, neighbourhoods, interior points, limit points, intervals, and their attributes.
CLO 2.	The learner will be able to understand order relation in IR and compute supremum and infimum of a subset of IR.
CLO 3.	The learner will be able to comprehend and apply the various results and properties of R.
CLO 4.	The learner will be able to define the limit of a function and to gauge if the function is continuous or not.
CLO 5.	The learner will be able to understand the algebra of limits, continuous functions, apply the property of intermediate value theorem to various continuous functions.

UNIT 1	Real Number System (15 LECTURES)
1.1	Real number system R and order properties of R, Absolute values and its properties.
1.2	AM-GM inequality, Cauchy-Schwarz inequality, Intervals and neighbourhoods, Hausdorff's property..
1.3	Bounded sets, l.u.b and g.l.b, l.u.b. axiom and its consequences, Archimedean property and its applications, density of rationals and irrationals.
UNIT 2	Limits of a real valued function (15 LECTURES)
2.1	Domain and range of a function, injective function, surjective function, bijective function, composite of two functions (when defined), Inverse of a bijective function.
2.2	Graphs of some standard functions such as $|x|$; e^x; log x; ax^2+bx+c; $1/x$, x^n (n $\geq$3); sin x; cos x; tan x; x sin($1/x$); x^2 sin($1/x$), step functions over suitable intervals of R:
2.3.	Definition of Limit of a function f(x) ; evaluation of limit of simple functions using, uniqueness of limit if it exists, algebra of limits , limit of composite function, sandwich theorem, left-hand-limit, right-hand-limits, non-existence of limits.
UNIT 3	Continuous functions: (15 LECTURES)
3.1	Continuity of a real valued function on a set in terms of limits, examples, Continuity of a real valued function at end points of domain, examples on sequential continuity
3.2	Algebra of continuous functions, Discontinuous functions, examples of removable and essential discontinuity.
3.3	Intermediate value theorem and its applications, Bolzano- Weierstrass theorem (statement only); Continuity on closed and bounded intervals.

NAME OF THE COURSE	**ALGEBRA AND DISCRETE MATHEMATICS-1**	
CLASS	FYBSC	
COURSE CODE	SBSMAT102	
NUMBER OF CREDITS	2	
NUMBER OF LECTURES PER WEEK	3	
TOTAL NUMBER OF LECTURES PER SEMESTER	45	
EVALUATION METHOD	INTERNAL ASSESSMENT	SEMESTER END EXAMINATION

TOTAL MARKS	25	75
PASSING MARKS	10	30

COURSE OBJECTIVES:

CO 1.	To provide the learner the necessary skills to work on the numerical applications of the concepts while understanding the structure of the natural number and integer systems.	
CO 2.	To enable the learner become competent in numerical computations using division, GCD, prime number concepts, and congruence relations.	
CO 3.	To develop in the learner, the ability to use equivalence relations and associated features to differentiate between sets of numbers.	
CO 4.	To enable the learner to develop the capacity to comprehend, apply, and solve numerical problems involving the principles of functions and binary operations.	

COURSE LEARNING OUTCOMES:

CLO 1.	The learner will be able to comprehend and apply the concepts of binary operators, relations, functions, prime number congruences, division of integers, and GCD.
CLO 2.	Through logical inductions, the learner will be able to prove mathematical propositions and develop mathematical ideas from the foundational axioms.
CLO.3.	In order to fulfill the requirements of the numerical assignments, the learner will be able to identify and construct bijective and invertible functions.
CLO.4.	The learner will be able identify and compute factors of a polynomial with multiplicity over the set of real and complex numbers, and also identify irreducible polynomials.

UNIT 1	Integers and divisibility (15 LECTURES)
1.1	Statements of well-ordering property of non-negative integers, Principle of finite induction (first and second) as a consequence of well-ordering property, Binomial theorem for non-negative exponents, Pascal's Triangle.
1.2	Divisibility in integers, division algorithm, greatest common divisor (g.c.d.) and least common multiple (l.c.m) of two integers, basic properties of gcd such as existence and uniqueness of g.c.d. of integers a and b, g.c.d can be expressed as $ma+nb, m,n$ are integers. Euclid's lemma, Euclidean algorithm.
1.3	Results on prime numbers and fundamental theorem of arithmetic.
UNIT 2	Equivalence Relations and Congruences (15 LECTURES)
2.1	Equivalence relations, Equivalence classes, properties such as two equivalence classes are either identical or disjoint, definition of partition, every partition gives rise of an equivalence relation and vice versa

2.2	Congruence - definition , elementary properties and applications. Euler's φ function, Statements of Euler's theorem, Fermat's theorem and Wilson theorem and their applications.
2.3.	Congruence as an equivalence relation on Z (set of integers), Residue classes and its properties.
UNIT 3	Functions and Binary operations : (15 LECTURES)
3.1	Definition of function, domain, co-domain and range of a function, composite function, examples, direct image and inverse image of a function f, injective, surjective and bijective functions, invertible functions.
3.2	Binary operations as a function, properties and examples.

NAME OF THE COURSE	MATHEMATICS PRACTICALS	
CLASS	FYBSC	
COURSE CODE	SBSMATP1	
NUMBER OF CREDITS	2	
NUMBER OF LECTURES PER WEEK	3	
TOTAL NUMBER OF LECTURES PER SEMESTER	45	
EVALUATION METHOD	INTERNAL ASSESSMENT	SEMESTER END EXAMINATION
TOTAL MARKS	20	80
PASSING MARKS	-	40
UNIT 1	Calculus-1 (15 LECTURES)	
1.1	Application of Archimedean property, intervals, neighbour-hood.	
1.2	Consequences of l.u.b. axiom, infimum and supremum of sets.	
1.3	Limit of a function and Sandwich theorem.	
1.4.	Left and Right hand limit	
1.5.	Continuous and discontinuous functions.	
1.6.	Applications of Intermediate Value theorem	
UNIT 2	Algebra and Discrete Mathematics-1 (15 LECTURES)	
2.1	Principle of finite induction	
2.2	Binomial theorem	
2.3.	G.C.D of an integer	
2.4.	Equivalence relation and equivalence classes	
2.5.	Congruence modulo relation on integers	

2.6.	Functions and binary operations	

ASSESSMENT DETAILS:(this will be same for all the theory papers)

Internal Assessment (25 marks)
Part 1: The Internal Assessment test shall be 3 questions.
   2. All questions shall be compulsory with internal choice within the questions

Questions	Sub-questions	Maximum marks
Q1	Objective type questions	5/10
Q2	Answer in one/two sentences	5/10
Q3	Derivation/Problem solving	5/10

Part 2: Attendance – **05 marks**
Semester End Examination – External Assessment (75 marks)
- The duration of the paper will be 2.5 hours.
- There shall be four compulsory questions
- Q1-Q3 questions shall be of 20 marks on each unit and fourth question will be of 15 marks based on Unit I, II and Unit III.
- Q-4 : There shall be 6 sub-questions each one is of 5 marks and attempt any 3.

Practical Assessment (for papers with practicals)
- The duration of the practical exam will be two hours.
- The students are allowed to write the paper if the attendance for practicals is more than 75%
- To appear in the practical exam, students must bring a properly certified journal.
- The practical paper will be of two sections. Section A will consist of 12 questions of 3 marks each. Section B will consist of 6 questions of 4 marks each. These questions will be based on the syllabus covered in the practicals. Students must attempt 8 questions from Section A and 4 questions from Section B.

SEMESTER 2

NAME OF THE COURSE	CALCULUS-2	
CLASS	FYBSC	
COURSE CODE	SBSMAT201	
NUMBER OF CREDITS	2	
NUMBER OF LECTURES PER WEEK	3	
TOTAL NUMBER OF LECTURES PER SEMESTER	45	
EVALUATION METHOD	INTERNAL ASSESSMENT	SEMESTER END EXAMINATION
TOTAL MARKS	25	75
PASSING MARKS	10	30

COURSE OBJECTIVES:

CO 1.	To develop in the learner, an understanding of the concepts of derivative of a function.
CO 2.	To impart knowledge of the methods of finding the higher order derivative of the given function.
CO 3.	To enable the learner understands the applications of the derivative of a function.
CO 4.	To develop an understanding of the concepts and application of Mean Value theorems.

COURSE LEARNING OUTCOMES:

CLO 1.	The learner can find the derivative of a function on the set of real numbers.
CLO 2.	The learner will be able to find the higher order derivatives of the functions.
CLO 3.	The learner will be able to apply the various concepts of differentiation on the functions to find the nature of the function.
CLO 4.	The learner will be able to apply the concepts of Mean Value theorems and find the approximate value of the function at a certain point.

UNIT 1	Differentiation of real valued function of one variable (15 LECTURES)
1.1	Definition of differentiation at a point of an open interval, examples of differentiable and non-differentiable functions, relation between continuity and differentiability.
1.2	Algebra of differentiable functions. Chain rule, Derivative of inverse functions, Implicit differentiation
1.3	Higher order derivatives, Leibnitz rule for higher order derivatives.
UNIT 2	Applications of differentiation: (15 LECTURES)
2.1	Increasing and decreasing functions, definition of local maximum and local minimum, stationary points, first and second derivative test, examples, Graph of functions using first and second derivatives, concave functions, points of inflection

2.2	Rolle's theorem, Lagrange's and Cauchy's mean value theorems, applications and examples.
2.3.	L-hospital rule without proof, examples of indeterminate forms.
2.4.	Taylor's theorem and its applications.
UNIT 3	Analytic Geometry in Euclidean Spaces: (15 LECTURES)
3.1	Review of vectors in R^2 and R^3, component form of vectors, basic notions such as addition and scalar multiplication of vectors, dot product of vectors, orthogonal vectors, length (norm) of a vector, unit vector, distance between two vectors, cross product of vectors in R^3, scalar triple product (box product), vector projections
3.2	Lines and planes in space, equation of sphere, cylinders and quadric surfaces (identification and graph)
3.3	Coordinate systems in R^2 and R^3

Main Reference:
1. James Stewart, Calculus, Third Edition, Brooks/cole Publishing Company, 1994.
2. G.B. Thomas and R. L. Finney, Calculus and Analytic Geometry, Ninth Edition, Addison-Wesley.

Additional Reference Books:

NUMBER OF LECTURES PER WEEK	3	
TOTAL NUMBER OF LECTURES PER SEMESTER	45	
EVALUATION METHOD	INTERNAL ASSESSMENT	SEMESTER END EXAMINATION
TOTAL MARKS	25	75
PASSING MARKS	10	30

COURSE OBJECTIVES:
CO 1.	To provide the learner the necessary skills to work on the numerical applications of the concepts while understanding the process of counting in discrete sets .
CO 2.	To enable the learner become competent in the concepts of polynomials and create models using them.
CO 3.	To develop in the learner, the ability to comprehend real and complex

	numbers and their applications in creating and solving the associated numerical applications.
CO 4.	To enable the learner to develop the capacity to comprehend, apply, and solve numerical problems involving the counting principles.

COURSE LEARNING OUTCOMES:

CLO 1.	The learner will understand the properties of polynomials under the binary operations and solve them using the techniques
CLO 2.	The learner will be able to understand the properties and therole of complex numbers in solutions to polynomials of degree n.
CLO.3.	The learner will be able to use various counting principles, permutation and combination in numerical problems and solve them with interpretation.
CLO.4.	The learner will apply the concepts of Permutation maps and derangements in understanding the various methods of placement

UNIT 1	Polynomials (15 LECTURES)
1.1	Definition of polynomial, Polynomials over F where F = Q or R, Algebra of polynomials, basic properties, division algorithm in F[X] (without proof) and g.c.d of two polynomials and its basic properties (without proof), Euclidean algorithm (without proof), applications,
1.2	Roots of a polynomial, relation between roots and coefficients, multiplicity of a root, remainder theorem, Factor theorem, applications, Necessary conditions for a rational number p/q to be a root of a polynomial with integer coefficients, simple consequences such as $\sqrt{p}$ is an irrational number where p is a prime number.
UNIT 2	Counting Principles (15 LECTURES)
2.1	Addition and multiplication principles, distributions of distinct and non-distinct objects, Multinomial coefficients, combinatorial interpretations, Multinomial theorem (without proof), applications
2.2	Pigeonhole Principle (statement only) and its applications.
2.3.	Stirling number S(n, k) and its elementary properties.
2.4.	Permutations of {1,2,…..n}. Cycles and transpositions. Decomposition of a permutation as a product of disjoint cycles and as product of transpositions. Inversions in a permutation. Sign of a permutation. Even and odd permutations, derrangements.
UNIT 3	Complex Numbers (15 LECTURES)
3.1	Addition and multiplication of complex numbers, modulus and amplitude of a complex number, real and imaginary parts and the conjugate of a complex number
3.2	Geometric representation of complex numbers, modulus, amplitude and conjugate of a complex number.
3.3	DeMoivres Theorem, roots of unity, primitive roots of unity, solutions of the equation $w^n = z$.

Main Reference:
1. Elementary Number Theory, David M. Burton, Second Edition, UBS, New Delhi.
2. Discrete Mathematics, Norman L. Biggs, Revised Edition, Clarendon Press, Oxford 1989.

PASSING MARKS	-	40

UNIT 1	Calculus-2 (15 LECTURES)
1.1	Differentiability of a function.
1.2	Higher order derivatives, Leibnitz theorem.
1.3	Maxima _ Minima and points of inflections
1.4.	Mean value theorems and its applications.
1.5.	Applications of Taylor's theorem and Taylors polynomials.
1.6.	Lines and planes in space
UNIT 2	Algebra and Discrete Mathematics-2 (15 LECTURES)
2.1	Division of polynomials and gcd
2.2	Root of a polynomial
2.3.	Pigeonhole principle
2.4.	Permutations and derangements
2.5.	Inclusion exclusion
2.6.	Complex numbers

ASSESSMENT DETAILS:(this will be same for all the theory papers)

Internal Assessment (25 marks)

Part 1: The Internal Assessment Test of 20 marks shall have 3 questions.

2. All questions shall be compulsory with internal choice within the questions
